

AI STRATEGIC INTELLIGENCE · PRODUCT UPDATE

Elevating Competitive Intelligence: The Empirisys Strategic Dashboard

Moving beyond basic metrics to MBA-level, AI-driven market analysis.

Tracking tells you what happened. Never what to do.

Traditional competitor tracking is retrospective and purely observational — a rear-view mirror, not a strategy.

Retrospective by Design

Dashboards log yesterday's moves. By the time a signal is reviewed, the strategic window has already closed.

No Bandwidth to Synthesize

Thousands of unstructured market signals per quarter — and no core-team capacity to manually turn them into actionable strategy.

Legacy Retrofits

Enablon, Cority and peers are retroactively bolting AI layers onto outdated software — surface intelligence on legacy foundations.

Strategy frameworks, running live.

A dedicated real-time hub for competitive strategy — three MBA-level frameworks built into the UI, powered by our NLP signal extraction.

01

AI-Enhanced Porter's Five Forces

Live data clusters industry dynamics into the five forces — entrants, substitutes, rivalry, suppliers, buyers.

Industry structure, scored in real time

02

Blue Ocean Strategy Canvas

A radar strategy canvas that maps our value curve against legacy incumbents — and exposes uncontested space.

Where we compete alone

03

VRIO Capability Matrix

Internal resources graded on Value, Rarity, Imitability and Organization — proving which advantages are durable.

Which moats actually hold

Industry dynamics, clustered by live data.

Each force is scored continuously from NLP-extracted market signals — not an annual strategy offsite.

COMPETITIVE RIVALRY

INTENSE

Direct rivals are pivoting to predictive models.

The hub monitors every rival's positioning shift — job posts, releases, messaging — and flags pivots toward prediction the week they begin.

- Pivot alerts on rival product language
- Rivalry intensity trended quarter over quarter

THREAT OF NEW ENTRANTS

HIGH

AI-native startups entering fast. The dashboard clusters funding rounds and product launches as they surface.

THREAT OF SUBSTITUTES

RISING

Generic LLMs (Copilot-class) are broad but shallow — no domain corpus, no audit trail. Tracked as a distinct cluster.

SUPPLIER POWER

LOW

Foundation models are commoditizing. Multi-vendor architecture keeps us switching-cost free.

BUYER POWER

MODERATE

Enterprise buyers consolidate vendors — but embedded safety workflows raise switching costs in our favor.

We compete where legacy can't follow.

The radar strategy canvas plots both value curves — the overlap is minimal by design.

— Empirisys (BOOST) --- Legacy systems

WHERE LEGACY SCORES HIGH

Retrospective logging depth, UI complexity, and total cost — factors buyers tolerate, not value.

OUR UNCONTESTED SPACE

- ✓ Predictive Safety AI
- ✓ Contextual NLP
- ✓ Specialized Consulting Advisory

Axes where no legacy incumbent registers a meaningful score.

Which advantages are actually durable.

Every capability graded on Value · Rarity · Imitability · Organization — sustainable advantage requires all four.

CAPABILITY	V	R	I	O	VERDICT
Predictive NLP Engine Domain-trained on safety-critical signals	✓	✓	✓	✓	SUSTAINED ADVANTAGE
Consulting Advisory Layer Expert guidance embedded in product	✓	✓	✓	✓	SUSTAINED ADVANTAGE
Real-Time Signal Pipeline Continuous market monitoring infrastructure	✓	✓	✗	✓	TEMPORARY ADVANTAGE
Legacy Vendor APIs Bolt-on AI layers over old software	✓	✗	✗	✗	COMPETITIVE PARITY

From tracking the market to **out-thinking** it.

The dashboard equips the Empirisys team with automated, executive-level consulting insight — continuously, not quarterly.

01

Deploy the Dashboard

Roll out the strategic hub to the founding team and make it the default lens for competitive decisions.

THIS MONTH

02

Integrate Live Client Feeds

Connect client data streams so every framework reflects real deployments, not just public signals.

NEXT QUARTER

03

Activate Sales Battlecards

Turn framework outputs into live battlecards to win enterprise accounts against legacy incumbents.
